Fotona Nd:YAG Laser in Gynecology:

- soft-tissue surgery: laparotomy, laparoscopic and hysteroscopic procedures
- aesthetic procedures: hair removal, laser lipolysis

Advantages of Nd:YAG Laser in Gynecology

- Incision, excision, vaporization and coagulation while submerged under fluid
- Easy access to difficult-to-reach locations
- Excellent depth-of-penetration control
- No tissue charring
- Neighboring tissue is preserved
- Minimal post-op adhesions
- Fast patient recovery with less pain and inflammation

Laparotomy: Nd:YAG myomectomy and polycystic ovarian syndrome treatments

Laparoscopy and Hysteroscopy: Intrauterine myomectomy and polyps removal treatments
